ESSENTIALS

CUSTOMER BENEFITS

- Get the most from your data such as re-using it for analytics
- Ensure regulatory compliance
- Minimal involvement for your IT organization for quick InfoArchive set up and management
- Infrastructure scalability to match your business demands
- Highly secure, employing the latest technologies and security measures
- Upgrades and patch management handled by EMC
- Backup and Restoration capabilities
- Less user downtime through system monitoring and performance tuning for stability and reliability
- Single-point accountability to ensure quick service resolution when needed
- Lower total cost of ownership by 20-50%

OVERVIEW

InfoArchive as a Service (IAaaS) is a cost-effective data and content management platform where EMC runs and manages your InfoArchive software in the cloud - saving you time, reducing cost, and simplifying InfoArchive software management.

This managed service ingests static and potentially regulated data and content from your application landscape into our EMC-controlled hosted environment – consolidating all data types, providing secure access and consistent compliance. With data volumes growing exponentially and retention periods and rules increasing, you need an easily accessible and agile compliant data repository that can scale to meet the needs of your business. InfoArchive as a Service enables you to get the most from your data and content – such as exposing it to end-user portal or reusing it for analytics, while maintaining regulatory compliance.

Operational cost savings of 30%-50% are typical over self-managed InfoArchive deployments. This service is available both in public and private cloud deployment options, on and off premise, and in all four of our data centers.

Leverage as Much Service as You Need

Your IT organization can leverage as much technology and service management as you need, relying on EMC technicians as an extension of your IT team. Time-consuming and specialized work is left to EMC experts. IAaaS is charged at a cost per terabyte – you only pay based on the data ingested. No additional infrastructure is required. InfoArchive as a Service allows your IT organization to:

- Easily add more document storage with incremental volume and decommission applications when business demands change
- Control concurrent search and retrieve Service Level Agreements to maintain and increase productivity
- Support disaster recovery with included Return Time Objective (RTO) and Return Point Objective (RPO) mechanisms to fit your needs
- Ensure the latest security and compliance technologies are in place and security patches applied
- Ensure quick service resolution due to EMC's single-point accountability and documented Service Level Agreements

CONTACT US

To learn more about how EMC products, services, and solutions can help solve your business and IT challenges, contact your local EMC Solution Principal, Account Manager, email us at ContactECDServices@emc.com or visit us at www.EMC.com/Documentum.
