

Keeping your business operations up to speed

BW Accelerator Infrastructure from Fujitsu

Turning data into valuable knowledge in seconds to help control business more precisely – that is the need met by Fujitsu with its BW Accelerator Infrastructure, a powerful solution for information analysis. It is based on leading industry-standard and open source technology and comes as a complete, preinstalled and quality-assured solution. The offering has optional support for SAP® BusinessObjects™ Explorer and is also available as an entry-level package.

Data analysis in real time

- » **Rapid deployment**
- » **Far lower administrative overhead** for BW (elimination of aggregate maintenance)
- » **Quicker response times – by a factor of 10 to 200**
- » **Very cost-effective** thanks to leaner administration and end-to-end use of industry-standard and open source technology
- » **New:** BW Accelerator Infrastructure as an extension of SAP NetWeaver BW with support for SAP BusinessObjects Explorer
- » **New:** BW Accelerator Infrastructure as an entry-level package

Complete solution to give you an information edge

Sound decisions and focused measures require a reliable, up-to-date database. Yet the larger the database gets, the more time analyses take. BW Accelerator Infrastructure from Fujitsu puts an end to this problem. This end-to-end solution enables the analysis of even several terabytes of data in a matter of seconds and gives users insight in real time into their enterprises, allowing them to give their business that crucial edge.

The solution improves the performance of SAP NetWeaver® Business Warehouse (SAP NetWeaver BW) component many times over – and does it very economically, too. PRIMERGY BX620 blade servers and EMC Celerra storage systems provide SAP NetWeaver BW Accelerator software with maximum performance at an attractive cost. Since it comes fully preinstalled and pretested, the solution can be up and running quickly – with implementation times in the range of a few days after delivery. The offering also includes an extensive range of BW services to enable seamless integration of the solution in the customer's BW environment. It also comprises upgrade services to SAP NetWeaver BW 7.0.

Everything from a single source: BW Accelerator Infrastructure – sample packages

Package	Entry	Power 1	Power 2
Server	3 PRIMERGY BX620 S5 with Intel processors, each 12 GB main memory	6 PRIMERGY BX620 S5 with Intel processors, each 24 GB main memory	8 PRIMERGY BX620 S5 with Intel processors, each 48 GB main memory
Storage	EMC Celerra NX 4	EMC Celerra NS 120	EMC Celerra NS 120
Service	Installation of SAP NetWeaver BW Accelerator and Novell SUSE Linux Enterprise Server 10; IP network integration, SAP NetWeaver BW integration, operations support Solution Contract: Proactive and reactive maintenance & support services ensure maximum availability of the complete IT infrastructure solution during operation		
Service options	Upgrade service to SAP NetWeaver BW 7.0 and Business Warehouse Accelerator upgrade		

All in one:

Performance, reliability, scalability

With BW Accelerator Infrastructure, Fujitsu offers a solution that meets the highest performance requirements, ensures a high degree of business continuity, and delivers flexible scalability. It comes completely preinstalled and pretested with SAP NetWeaver BW Accelerator. The solution is driven by PRIMERGY blade servers that have been specially developed for compute-intensive applications and offer the highest possible data throughput. EMC's Celerra systems, an extremely powerful storage platform, assure high-end data security. They feature very high reliability, availability and performance in managing the fast-growing volume of data in SAP NetWeaver BW environments. To ensure maximum productivity in data management, EMC also offers industry-leading software.

Everything is so simple:

Services for rapid startup and smooth operation

Fujitsu offers a special service for quick and easy integration of the solution in operations. The package comprises preinstallation of all software, configuration and integration with SAP NetWeaver BW and even handover for productive operation. An upgrade service also allows customers to migrate to SAP NetWeaver BW 7.0 and quickly leverage the solution's advantages for their business.

The Fujitsu SolutionContract offers maintenance for the infrastructure solution during operation, with reactive and proactive service options. Depending on requirements, they can even range up to 24x7 support.

New: Support for the new-generation BW Accelerator

Enterprises have to be able to find answers to their questions quickly and easily. SAP BusinessObjects Explorer, the accelerated version for SAP NetWeaver BW, allows users to do just that with an intuitive search screen. Data can be found using keywords and business-critical questions answered without the need for any special training or prior know-how.

BW Accelerator Infrastructure from Fujitsu also supports this accelerated version. We integrate the new offering from SAP AG in a customer-specific way on a project basis. Proven BW consulting and integration services ensure quick and secure integration in the customer's existing SAP application environment.

New: The entry-level package from Fujitsu

Fujitsu can now provide an optimized BW Accelerator Infrastructure as an entry-level package with a very good price/performance ratio. It was put together for customers with more modest needs and growth expectations.
