

EMC Health Check for Oracle Applications

A 360-degree view of the Oracle application and infrastructure environment

To get full value from their Oracle E-Business Suite investments, businesses need to ensure that their software runs on an optimized infrastructure.

Integrated application and information infrastructure assessment

The EMC® Oracle Applications Health Check provides an assessment of the customer's existing Oracle E-business Suite production and test environments. The Health Check serves to gather system and performance data in order to make recommendations for optimizing the Oracle Applications environment. The Oracle E-Business Suite Health Check is a fixed-time, fixed-scope service in which EMC/Oracle experts analyze your operating environment, identify problems, and recommend improvements.

During this engagement, EMC:

- Reviews and profiles the customer's Oracle Application production and test environments
- Monitors and extracts configuration and performance data from a single EMC CLARiiON® or Symmetrix® array
- Extracts connectivity and configuration data from attached hosts
- Conducts interoperability and performance monitoring of the CLARiiON or Symmetrix array and attached devices as determined within the scope of the Statement of Work
- Collects and analyzes data from the Oracle Database and Application environments, including storage performance metrics
- Provides a final report detailing recommendations
- Conducts a Finding Review to familiarize the customer with EMC Oracle Applications Health Check data and recommendations

The assessment identifies and documents elements of the Oracle Applications system and compares these findings to a baseline typical of a healthy implementation with similar business requirements. The specific scope of work performed targets issues related to setup and configuration of the current Oracle 11i Applications environments. The system is reviewed from both infrastructure and database/application perspectives.

Recommendations will center on data layout, backup and recovery, availability, and infrastructure. The deliverable from this engagement is a final report that details the primary areas of concentration.

Trust EMC's information infrastructure experience and expertise

EMC and Oracle have long-standing relationships with more than 40,000 mutual customers. And as more and more Web-enabled capabilities are included in the Oracle E-Business Suite, the underlying storage infrastructure becomes even more critically important. With the EMC Health Check for Oracle Applications, EMC Technology Solutions experts bring the storage infrastructure together with our partners and our Oracle expertise to make sure your business runs smoothly.

The EMC Health check for Oracle Applications is available for any customer running Oracle E-Business Suite software (versions 10.x, 11.0.x, 11.5.x) on an EMC storage infrastructure (Symmetrix or CLARiiON).

With the EMC Health Check for Oracle Applications, you will be able to:

- Obtain a 360-degree review of your Oracle environment—from storage to application
- Reduce storage infrastructure costs
- Minimize business disruption
- Ensure current and future service-level requirements are achieved

Take the Next Step
