

# EMC Documentum Archive Services for SAP

## Secure, scalable, and storage-aware archiving of SAP® data, reports, and documents

EMC® Documentum® Archive Services for SAP® enables organizations to securely archive mission-critical SAP data, reports, and documents that support IT consolidation and regulatory compliance activities. Archive Services for SAP easily integrates with EMC storage devices, such as EMC Centera™, and integrates with EMC Documentum records management products to handle complex retention policies. Because Archive Services for SAP can be deployed in a modular fashion, companies can first take advantage of its core SAP archiving capabilities, later extending them to meet additional enterprise document management (EDM) requirements. For example, companies can reuse SAP reports and documents for EDM and Web content management (WCM) purposes; replicated metadata from SAP business objects can be added to archived documents and reports so they can be used by SAP and non-SAP users with greater intelligence and effectiveness across the enterprise.

### The Big Picture

- Automatically archives SAP documents, reports, and data
- Easily handles broad SAP document types, volumes, and sizes
- Deploys in modular fashion
- Supports regulatory compliance and IT consolidation projects
- Meets SAP ArchiveLink® software certification
- Integrates with EMC storage products

### Manage explosive SAP data and document growth

The rapid growth of IT application data can make an organization's applications, application servers, databases, and networks inefficient. As IT data proliferates, service quality declines. IT consolidation efforts are aimed at reducing total cost of ownership, improving application use, and streamlining the migration to an updated infrastructure. Failure to consolidate means organizations might waste the value in archived transactional data for more strategic planning or business intelligence applications. Potentially worse, organizations might lose data entirely.

Archive Services for SAP automatically archives transactional data in conjunction with the SAP Archive Development Kit. Archive Services for SAP also automatically archives and properly classifies SAP printlists, often generated in large numbers by SAP finance and materials management applications. Automatically generated SAP documents—such as invoices, shipping notices, work orders, and change requests—can be automatically archived and classified for future reuse and distribution. These services are critical for consolidating complex SAP IT infrastructures and can reduce cost of ownership while increasing the quality of service.

## Achieve SAP data and document compliance

Increased corporate regulations and a demand for tighter security calls for greater compliance functionality and data safeguards in a company's SAP applications, as well as the ability to retain transactional data and documents according to approved retention policies. Archive Services for SAP tightly integrates with the Documentum platform's advanced retention features and security model. Archive Services for SAP also tightly integrates with EMC storage products, such as EMC Centera, designed specifically for compliance applications. Together they form a comprehensive compliance solution.

## Create a platform for advanced SAP EDM value

Archive Services for SAP is an essential component of a tiered set of EMC products, giving SAP-centric enterprises unprecedented EDM functionality. Additional tiers offer the ability to classify archived documents, such as printlists, and render them into broad-use formats, such as PDF, HTML, and ASCII, for reuse by non-SAP users. Printlists and documents can be classified into taxonomies that can be posted to customer, employee, or vendor intranets and portals. SAP EDM applications, such as streamlined invoice processing, can be created by linking documents and content with SAP business objects, making them easily accessible to SAP users. Other SAP EDM applications, such as plant and facilities maintenance, engineering document management, and contracts management, can take advantage of high-value, SAP document repository services.
