

Adding A QuickScan™ Pro Exporter – A Mission-Critical Requirement for ISVs in the Imaging and Capture Markets

QuickScan™ Pro is an out-of-the-box imaging solution that makes an ideal complement to product offerings from independent software vendors (ISVs) in the imaging market space. Based on the ISIS® scanning standard from EMC Captiva®, QuickScan Pro provides all the necessary capabilities for high-speed scanning, image enhancement, barcode recognition, OCR, job separation, and exporting document images and data to content management systems.

QuickScan Pro uses a variety of exporters to deliver images and metadata to enterprise applications such as content management systems or other databases. Exporters can also be used to enhance functionality in QuickScan Pro, for example allowing ISVs with proprietary technology to write custom exporters that can be launched at the batch level.

Writing an exporter for QuickScan Pro is simple using the QuickScan Pro Exporter Package. The package includes thorough instructions, sample exporters with source code, definitions of the interface required to make an exporter and access to a knowledgeable Sales Engineer to help with the development process if necessary.

Compatibility

QuickScan Pro offers guaranteed compatibility and has been tested to work with every one of the over 300 ISIS-enabled scanners currently on the market.

Marketability

By offering integration with QuickScan Pro, ISVs immediately gain market recognition from the EMC Captiva name and with leading hardware manufacturers. Fujitsu, Hewlett-Packard, Kodak, Avision, Epson, Ricoh, Visioneer, Xerox, and Inotec all currently bundle versions of QuickScan Pro with their document imaging scanners.

Functionality

Many of the built-in functions found in QuickScan Pro are unique, including MultiStream, color image processing, barcode recognition, and job separation. With an application-specific exporter for QuickScan Pro, ISVs can enhance their own product offerings to better suit the needs of their customers.

Affordability

Although QuickScan Pro includes enterprise-level technology, its price point is ideal for the small to mid-size business and stays within a departmental budget. QuickScan Pro allows ISVs to take advantage of growth in the low to mid-volume market by providing suitable offerings at the appropriate price point.

Expanded Offerings

For ISVs with a primary focus aside from imaging, adding a QuickScan Pro exporter is the perfect way to augment applications with additional scanning features and offer customers additional options. QuickScan Pro can be used to supplement basic functionalities with enterprise-level technology that can be used in situations where ISV software may not otherwise fulfill customers' imaging needs.

The Capabilities of QuickScan Pro

The following are just a few of the reasons why any company considering an imaging solution should select QuickScan Pro:

- **VIEW** – Use the high performance viewer to display and manipulate images, with these features: fast scaling (zoom in and out); image manipulation; thumbnail viewer; rotation; and scale-to-gray conversion that improves the readability of images.
- **ANNOTATE** – Add to images with highlighting, freehand line drawing, “sticky notes,” and many other annotations.
- **IMAGE ENHANCEMENT** – Improve document images with filters that “clean-up” a scanned image: de-skew, de-speckle (noise reduction), line removal, smoothing, and many more filters increase the readability of scanned images and improve data extraction.
- **BARCODES** – Detect and read both 1D and 2D barcodes anywhere within a scanned document image.
- **BATCH HANDLING** – Customize profiles to make batch scanning more efficient.
- **MULTISTREAM PROCESSING AND AUTOMATIC COLOR DETECTION** – Receive both color and binary image streams in a single scan.
- **JOB SEPARATION** – Separate scanned images seamlessly by blank pages, page count, barcodes, etc.
- **OPTICAL CHARACTER RECOGNITION (OCR)** – Convert text from scanned documents into usable data using powerful OCR capabilities without having to retype paper documents.

Cost-effective & Time-effective
