**GET STARTED**
# Executive Summary

The Digital Universe Is Huge and Growing Exponentially

Healthcare Is One of the Fastest-Growing Segments of the Digital Universe

Healthcare Applications Will Drive Data Growth

Regulatory Compliance Is a Key Data Growth Driver

The Compliance Challenge: Gaining Control of Data Across the Health System

The Result Is Too Much Healthcare Data Not Adequately Protected

Aging Population with Chronic Conditions Will Increase Demand for Healthcare Services

Shortage in Primary Care Physicians Will Increase Need for Provider Efficiency

But Patient Expectations Will Continue to Increase

Connected Devices Will Contribute an Increasing Amount to the Healthcare Digital Universe

Need to Target High-Value Data to Improve Patient Care Quality

Future Vision: The Industrialization of Healthcare

What Hospitals Should Do Today to Prepare for the Coming Trends
Executive Summary: **Data Is Helping Drive a New Era in Healthcare**

### The Healthcare Digital Universe Is Big — and Growing Exponentially

Healthcare represents a significant percentage of the overall Digital Universe, and is growing at 48% per year — even faster than the rest of the Digital Universe.

### Key Healthcare Trends Will Increase Growth of and Dependence on Data

- New healthcare applications and regulatory/compliance challenges will drive data growth.
- Aging populations and physician shortages mean providers will need to be more efficient and do more with less.
- Higher patient expectations and continued introductions of new technology will drive significant growth in data.
- Data is growing quickly, but the value of data to quality, cost, and outcomes has never been higher.

### The Coming Future Healthcare Model

Shift from one-to-one to "mass" model:
- Will require increased efficiencies
- More collaborative/self-care
- Focus on Population Health Management
- Data will enable information-driven decisions and IT will be a key enabler

### Getting Ready: What You Need to Do Now

- Improve and empower IT to scale workflows and applications
- Adopt analytics technologies and data environments
- Manage security/compliance more effectively
- Adopt strong mobile strategies
- Operationalize data backup/disaster recovery strategies
- Deploy cloud for coordinated and team-based care
The Digital Universe is Huge—and Growing Exponentially

If all data on the planet in **2013** — the Digital Universe — were represented by memory in a stack of tablets, it would stretch **two-thirds** of the way to the Moon.*

By **2020**, it would stretch **6.6 times** from the Earth to the Moon.*

**2013**

**4.4 ZETTABYTES**

40% **ANNUAL GROWTH**

**2020**

**44 ZETTABYTES**

Source: IDC, 2014

* iPad Air - 0.29” thick, 128 GB
Healthcare is one of the fastest-growing segments of the Digital Universe, growing at 48% per year (compared to 40% per year for the overall Digital Universe).

By 2020, it would be...
- over 82,000 miles high and reach over 1/3 of the way to the Moon*
- The loaded tablets would fill that same hospital 11.3 times*
Healthcare Applications Will Drive Data Growth

- **EHR systems** are already in use in most U.S. hospitals
- **EHR replacement has already begun**, with 50% of health systems projected to be on second-generation technology by 2020
- **Diagnostic and other health applications** are also growing with increasing use of medical images and studies with larger image sizes
- **Adoption of clinical next generation sequencing (NGS) applications** will drive the re-evaluation of access, privacy, and data retention policies
- **Additional unstructured contextual content** such as video, audio, and text are being stored in medical records
Regulatory Compliance is a Key Data Growth Driver

A patchwork of country and state regulations dictate how long healthcare providers must maintain patient data; many choose to maintain it indefinitely.

There’s a high economic incentive to better manage the security and privacy of data.

Healthcare providers have been charged hundreds of thousands or even millions of dollars for a single breach.
The Compliance Challenge: **Gaining Control of Data Across the Health System**

### IT Controls:
- 500 Beds
- 8,000 Employees
- 400 Applications
- 500 Databases
- 1,000 Interfaces
- 10,000 Desktops
- 500 Owned/controlled Tablets
- 2,000 Owned/controlled Mobile Devices (provisioned)

### IT Does Not Control:
- Departmental applications and devices purchased without IT involvement or even knowledge
- 1,000 community physicians with their own tablets and smartphones
- 300,000 patients with their own devices
- Physician and employee-owned smartphones and tablets
- Other data
- Other applications

The sheer amount of systems and data outside of IT control can create a "shadow IT" compliance challenge.

**CIOs options include:**
- Do nothing
- Lock down all devices, including mobile
- Adopt control over all devices, but allow exceptions
- Embrace an enterprise mobile/BYOD data management strategy
Consequences of unplanned downtime, data loss, and breaches include:

- Financial penalties
- Breach of patients' trust
- Cost of remediation
- Public relations consequences

The Result Is Too Much Healthcare Data Not Adequately Protected

of the Healthcare Digital Universe Does Not Need Protection

HEALTHCARE DIGITAL UNIVERSE

93% of Healthcare Digital Universe Needs Protection

EXAMPLES:
- Medical records
- Claims histories
- Patient protected health information (PHI)

57% Is Somewhat Protected

43% Is Not Adequately Protected

Source: IDC, 2014
Aging and population growth are expected to account for 81% of growth in healthcare demand between 2010 and 2020.

Older, sicker patients have more chronic conditions, increasing the cost of delivering healthcare.

These trends are consistent around the world.

Aging Population with Chronic Conditions Will Increase Demand for Healthcare Services

The number of older healthcare recipients will grow...

U.S. MEDICARE BENEFICIARIES

<table>
<thead>

<th>Year</th>
<th>2013</th>
<th>2030</th>
</tr>
</thead>
<tbody>
<tr>
<td>MILLION</td>
<td>52</td>
<td>80</td>
</tr>
</tbody>
</table>

...and they will get even older

U.S. POPULATION OVER AGE 85

<table>
<thead>
<tr>
<th>Year</th>
<th>2013</th>
<th>2050</th>
</tr>
</thead>
<tbody>
<tr>
<td>MILLION</td>
<td>5.5</td>
<td>19</td>
</tr>
</tbody>
</table>

Will represent 20% of the U.S. population.
Number of full-time primary care physicians in U.S. is projected to increase by 8% from 2010 to 2020.

Demand for primary care physicians will grow by 14%, resulting in a 20,400 physician shortfall.

This will force healthcare providers to be more efficient and do more with less.

Providers must increase deployment of IT to help scale.
But Patient Expectations Will Continue to Increase

Patient expectations will increase for treatment options and speed of delivery — such as mobile monitoring, remote diagnostics, aging in place, and patient-centered medical home.

Personalized medicine will continue to drive demand for cutting edge research and technologies such as advanced medical imaging, digital pathology, and genomics.

Increased use of personalized medicine adds further to the growth of the digital universe.
Connected Devices Will Contribute an Increasing Amount to the Healthcare Digital Universe

<table>

With Research & Analysis by IDC
The amount of data in the healthcare Digital Universe can be daunting. The challenge of data growth and complexity is finding the right data at the right time. But with Big Data/analytics, healthcare providers can focus in on data most useful for diagnosis, treatment, and discovery.

**At 3.1%, highest-value target-rich data is a much more manageable area of discovery.**

More effective data analytics will improve care outcomes, population health, readmissions—and ultimately, help lower patient care costs.

**57% of all healthcare data is useful if tagged and analyzed** (e.g., for diagnoses, research, or analysis).

**3.1% of healthcare data provides the highest value**; the challenge is identifying this needle in the haystack.

Future Vision: The Industrialization of Healthcare

Better use of data will enable information-driven decisions at lower costs
- These will improve drug discovery, diagnostics, population management, and business intelligence
- They will drive better outcomes, prevention, and lower readmissions

IT will be a critical enabler of future success, and will require an increased level of agility, flexibility, and scale

Critical data technologies will include:
- Hybrid cloud to allow better sharing and collaboration across continuum of care
- Data lakes to allow at-scale storage and data interpretation
- Enterprise-level protection and security

With Research & Analysis by IDC
What **Hospitals** Should Do **Today** to Prepare for the Coming Trends

Evolving to the new model will have its share of challenges. To better prepare themselves for the coming transition, healthcare providers should:

| Empower IT to more quickly provision new applications, linking to emerging technologies for cloud, big data and analytics, mobile, and social | Adopt analytics technology for performance improvement, care quality, and operational efficiency |
| Implement unstructured content repositories/VNAs to better support delivery with longitudinal care records | Adopt strong mobile device and data management strategies for owned and third-party devices and apps |
| Adopt cloud to improve performance, workflows, and processes for coordinated and team-based care | Test and operationalize compliance, data backup, and disaster recovery strategies |
