CHAPTER 1

Isilon Supportability and Compatibility Guide

This guide provides supportability and compatibility information for Isilon software and hardware.

- Introduction.......................................................................................................................... 6
Introduction

Refer to this guide for supportability and compatibility information for Isilon hardware and software products.

Isilon recommends that customers run the Target Code version of OneFS. A OneFS release is designated as Target Code after it satisfies specific criteria, which includes production time in the field, deployments across all supported node platforms, and other quality metrics. To ensure that your clusters are running the most stable and reliable version of OneFS, upgrade to the latest Target Code available for the OneFS family that meets your business needs.

Target Code represents minimum OneFS release recommendations and does not account for unique storage workflows. When considering which version of OneFS to adopt, be sure to review your business needs with your Isilon account representative. You may also want to install a later version of OneFS to take advantage of new or improved functionality.

For the list of Target Code versions of OneFS, see Current Isilon Software Releases. Your suggestions help us to improve the accuracy, organization, and overall quality of the documentation. Send your feedback to https://www.research.net/s/isi-docfeedback. If you cannot provide feedback through the URL, send an email message to docfeedback@isilon.com.
CHAPTER 2

Software

This section contains information about Isilon software compatibility.

OneFS upgrade compatibility

This section lists available OneFS upgrade compatibility information.

To successfully plan for and perform a OneFS upgrade, you must follow the procedures detailed in the appropriate OneFS Upgrade Planning and Process Guide:

- OneFS 7.x Upgrade Planning and Process Guide
- OneFS 8.0.0 - 8.1.2 Upgrade Planning and Process Guide

Rolling and simultaneous upgrades are supported for all upgrades from OneFS 8.0.1 to OneFS 8.1.2. Rolling upgrades are performed by default. For complete information about supported upgrade paths for OneFS 8.1.0, see the OneFS 8.0.0 - 8.1.2 Upgrade Planning and Process Guide.

If you are upgrading from OneFS 7.1.x or earlier to OneFS 7.2.0.0 or later, check the NFS exports for non-UTF-8 encoded file or directory names. For information, refer to the appropriate Upgrade Planning and Process Guide for your upgrade path.

See the OneFS Upgrades - Isilon Info Hub for complete information.

For information about support for simultaneous and rolling upgrades, refer to the release notes for the version of OneFS that you are installing.

You can only upgrade directly to OneFS 7.2.1 from OneFS 7.1.1.4 or later, or OneFS 7.2.0.2 or later. See Upgrade Paths to OneFS 7.2.1.0 for complete information.

You can only upgrade directly to OneFS 8.0.0 from OneFS 7.1.1.4 through 7.1.1.7, or OneFS 7.2.0.2 through 7.2.0.4, or OneFS 7.2.1.0 through OneFS 7.2.1.1. See the Isilon OneFS 8.0.0.0 Release Notes for complete information about supported upgrade paths.

You can download the latest version of OneFS for your cluster from the EMC Online Support website.

For more information about how OneFS addresses the convergence of Big Data and Enterprise IT, visit the Isilon OneFS Operating System web page.

For information about the support and service life cycle dates for Isilon hardware and software products, see the Isilon Product Availability Guide.

Isilon SyncIQ

This section describes the versions of OneFS that can be synchronized using SyncIQ.

SyncIQ delivers extremely fast replication of millions of files and terabytes of data over the WAN and LAN. SyncIQ enables replication jobs to be parallelized and evenly distributed across all sending and all receiving nodes in the Isilon storage clusters.

---

**Note**

Features available in newer versions of OneFS might not work in earlier versions of OneFS when you sync newer OneFS versions to earlier versions.

Customers who are running MigrationIQ on their Isilon cluster are encouraged to upgrade to SyncIQ. MigrationIQ has been discontinued, and its functionality has been incorporated into SyncIQ. Contact Isilon Technical Support if you want to make this transition.

For information about SyncIQ, see the Isilon SyncIQ web page.
Isilon SyncIQ compatibility

The table in this section shows the versions of OneFS that can be synchronized using SyncIQ.

<table>
<thead>
<tr>
<th>Source Cluster</th>
<th>Target cluster running OneFS</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>7.1.x **</td>
</tr>
<tr>
<td>OneFS 7.1</td>
<td>+</td>
</tr>
<tr>
<td>OneFS 7.2</td>
<td>+</td>
</tr>
<tr>
<td>OneFS 8.0.x</td>
<td>+</td>
</tr>
<tr>
<td>OneFS 8.1.x</td>
<td>+</td>
</tr>
</tbody>
</table>

**This version of OneFS is no longer supported. For information about the support and service life cycle dates for Isilon hardware and software products, see the Isilon Product Availability Guide.

Isilon InsightIQ

This section describes OneFS and InsightIQ compatibility.

InsightIQ is an off-cluster performance and analytics tool that identifies performance bottlenecks in a cluster.

Depending on the version of OneFS that the monitored cluster is running, certain InsightIQ features might not be available. For information about InsightIQ, see the Isilon InsightIQ webpage.

You can access the InsightIQ application through any current web browser that supports sophisticated graphics. For more information about supported browsers, see the “Web browsers” section in this document.

The InsightIQ web application interface is optimized for a screen that is 1,280 pixels wide.

Note

OneFS 8.0.0 File System Analytics (FSA) statistics are compatible only with InsightIQ 4.0 and later releases.

InsightIQ and OneFS compatibility

<table>
<thead>
<tr>
<th>InsightIQ</th>

<td></td>
<td></td>
<td></td>
<td></td>
<td>*</td>
<td></td>
</tr>
</tbody>
</table>

**Isilon SupportIQ**

The table in this section lists the compatible versions of OneFS and the Isilon SupportIQ remote support module.

The Isilon SupportIQ module allows Isilon Technical Support personnel to gather diagnostic data about the cluster with your permission. It is included with the OneFS operating system through OneFS 7.2.x. EMC ESRS is the preferred remote support service.

The SupportIQ module is deprecated as of OneFS 8.0.

---

**Note**

SupportIQ is no longer supported. You can no longer upload information about your cluster or provide Isilon Technical Support with remote access to the cluster through SupportIQ. For more information, see the Termination of Support announcement available on the Dell EMC Customer Support site.

<table>
<thead>
<tr>
<th>OneFS Compatibility</th>

<tr>
<td>7.1.x</td>
</tr>
<tr>
<td>7.2.x</td>
</tr>
<tr>
<td>SupportIQ</td>
</tr>
<tr>
<td>*</td>
</tr>
<tr>
<td>*</td>
</tr>
</tbody>
</table>

**EMC Secure Remote Support (ESRS)**

The table in this section lists the compatible versions of OneFS and EMC Secure Remote Support (ESRS).

EMC Secure Remote Support (ESRS) provides remote support capability for your Isilon cluster. ESRS enables technical support personnel to remotely manage your Isilon cluster to troubleshoot an open support case with your permission.

ESRS is a proactive, IP-based, bi-directional remote servicing capability for customer Dell EMC products. ESRS is secure, high speed, and operates 24x7.

See the ESRS section in the OneFS 7.1 FAQ for more information.
### OneFS/VMware ESXi compatibility

The table in this section lists the compatible versions of OneFS and VMware ESXi.

<table>
<thead>
<tr>
<th>ESRS Gateway 2.x</th>
<th>OneFS 7.2.x</th>
<th>OneFS 8.0.x</th>
<th>OneFS 8.1.0</th>
<th>OneFS 8.1.2</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ESRS Gateway 2.x</strong></td>
<td>*</td>
<td>*</td>
<td>*</td>
<td>*</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>ESRS Gateway 3.x (VE)</th>
<th>OneFS 7.2.x</th>
<th>OneFS 8.0.x</th>
<th>OneFS 8.1.0</th>
<th>OneFS 8.1.2</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ESRS Gateway 3.x (VE)</strong></td>
<td>*</td>
<td>*</td>
<td>*</td>
<td>*</td>
</tr>
</tbody>
</table>

**Note**

ESRS Gateway 3.x is required for the feature enhancements available in ESRS for OneFS 8.1.x.

**Note**

This version of OneFS is no longer supported. For information about the support and service life cycle dates for Isilon hardware and software products, see the Isilon Product Availability Guide.

### Isilon SRA for VMware SRM

The table in this section lists the compatible versions of OneFS, Isilon Storage Replication Adapter (SRA) for VMware, and VMware vCenter Site Recovery Manager (SRM).

Isilon Storage Replication Adapter (SRA) enables VMware vCenter Site Recovery Manager (SRM) to manage the replication of VMware ESX server virtual machines running on Isilon clusters.

VMware SRM facilitates the migration and disaster recovery of virtual machines stored on Isilon clusters. Isilon SRA enables VMware vCenter SRM to automatically manage the setup, testing, and failover components of the disaster recovery processes for Isilon clusters. You can manage the replication of virtual machines (VMs) stored on one Isilon cluster to another Isilon cluster.

Before you can install the Isilon Storage Replication Adapter (SRA) for VMware vCenter Site Recovery Manager (SRM), you must set up two vCenter servers. These vCenter servers are referred to as the primary and secondary sites. You must then pair...
the primary and secondary sites through VMware SRM and create a VMware datastore on the primary site that resides on an Isilon cluster.

For more information, see the Isilon SRA for VMware SRM Release Notes.

**Note**

Where provided, an exact OneFS version number indicates the minimum version of OneFS that is required.

<table>
<thead>
<tr>
<th>OneFS Compatibility 7.2.x 8.0.x</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ESXi 6.0</strong></td>
</tr>
<tr>
<td><strong>ESXi 6.5</strong></td>
</tr>
</tbody>
</table>

**VAAI NAS plug-in for OneFS**

The table in this section lists the compatible versions of OneFS, the VMware vSphere API for Array Integration (VAAI) plug-in for OneFS, and VMware ESXi.

The VMware vSphere API for Array Integration (VAAI) integrates VMware vSphere with an Isilon cluster to clone virtual disks, to create thick virtual disk files, and to monitor disk space.

The OneFS operating system uses VAAI to perform certain storage and management operations for VMware ESXi hypervisors. VAAI increases the speed at which virtual machine (VM) operations are performed for VMs that are stored on Isilon clusters.

For more information, see the Isilon Plug-ins for VMWare webpage on the EMC Online Support website.

<table>
<thead>
<tr>
<th>OneFS Compatibility</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ESXi Version</strong></td>
</tr>
<tr>
<td><strong>ESXi 6.0</strong></td>
</tr>
<tr>
<td>VAAI 1.2.1</td>
</tr>
<tr>
<td>VAAI 1.2.2</td>
</tr>
<tr>
<td>VAAI 1.2.4</td>
</tr>
<tr>
<td><strong>ESXi 6.5</strong></td>
</tr>
<tr>
<td>VAAI 1.2.1</td>
</tr>
<tr>
<td>VAAI 1.2.2</td>
</tr>
<tr>
<td>VAAI 1.2.4</td>
</tr>
<tr>
<td><strong>ESXi 6.7</strong></td>
</tr>
<tr>
<td>VAAI 1.2.1</td>
</tr>
<tr>
<td>VAAI 1.2.2</td>
</tr>
<tr>
<td>VAAI 1.2.4</td>
</tr>
</tbody>
</table>

**Note**

VAAI 1.2.3 is deprecated. Therefore, we recommend that you use VAAI 1.2.4 instead.

**Note**

OneFS 8.1.1 is not certified with any version of the VAAI NAS plug-in.
VMware vSphere API for Storage Awareness (VASA)

The table in this section lists the compatible versions of OneFS, the VMware vSphere API for Storage Awareness (VASA), and VMware ESXi.

OneFS supports the following VASA versions using the specified VMware ESXi versions.

<table>
<thead>
<tr>
<th>OneFS Compatibility</th>
<th>7.2.x</th>
<th>8.0.x</th>
</tr>
</thead>
<tbody>
<tr>
<td>VASA 1.0-ESXi 6.0</td>
<td>*</td>
<td>*</td>
</tr>
<tr>
<td>VASA 1.0 - ESXi 6.5</td>
<td></td>
<td>*</td>
</tr>
</tbody>
</table>

EMC Storage Analytics (ESA) module for Isilon

The table in this section lists the compatible versions of OneFS and EMC Storage Analytics (ESA) for Isilon.

EMC Storage Analytics (ESA) links VMware vRealize Operations Manager with the EMC Adapter, also referenced as EMC Storage Analytics Connector, to monitor and analyze the performance and health of storage applications.

An Isilon adapter instance is bundled within the EMC Adapter and collects the performance metrics for an Isilon cluster. You can install ESA and configure the Isilon adapter instance by following the instructions in the EMC Storage Analytics Installation and User Guide. See the EMC Storage Analytics for Isilon Technical Note for details.

<table>
<thead>
<tr>
<th>OneFS Compatibility</th>
<th>7.2.1</th>
<th>8.0.x</th>
</tr>
</thead>
<tbody>
<tr>
<td>ESA Module for Isilon</td>
<td>*</td>
<td>*</td>
</tr>
<tr>
<td>ESA Module for Isilon 4.0</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

IsilonSD Edge

The table in this section lists the compatible versions of IsilonSD Edge, IsilonSD Management Server, and VMware ESXi and vCenter Server.

<table>
<thead>
<tr>
<th>VMware vCenter and ESXi Versions</th>
<th>Supported IsilonSD Management Server Versions</th>
<th>Supported OneFS VM Versions</th>
</tr>
</thead>
<tbody>
<tr>
<td>6.0</td>
<td>1.0.1, 1.0.2, 1.0.3, 1.1.0</td>
<td>8.0.0.0 and later, 8.0.1.0 and later, 8.1.0.0 and later</td>
</tr>
<tr>
<td>6.5</td>
<td>1.0.2, 1.0.3, 1.1.0</td>
<td>8.0.0.0 and later, 8.0.1.0 and later, 8.1.0.0 and later</td>
</tr>
</tbody>
</table>

See the IsilonSD Edge With IsilonSD Management Server Release Notes corresponding to your management server version for the latest supportability information.
Authentication providers

The table in this section lists the compatible versions of remote authentication providers and OneFS.

OneFS supports the following remote authentication providers to verify that users attempting to access the cluster are who they claim to be. For information about how to connect OneFS to an authentication provider, see the OneFS Administration Guide. For information about how to connect OneFS 7.x to LDAP and Active Directory in combination, see How to connect Isilon OneFS 7.x to LDAP and Active Directory.

<table>
<thead>
<tr>
<th>Authentication Provider</th>
<th>Application</th>
<th>Notes</th>
</tr>
</thead>
</table>
| Kerberos                | MIT Kerberos 1.7 and later | OneFS 8.0.0.0 and later releases support the following Kerberos encryption types:  
  - AES256-CTS  
  - AES128-CTS  
  - DES-CBC-CRC  
  - DES-CBC-MD5  
  - RC4-HMAC  
  OneFS releases earlier than 8.0.0.0 do not support Kerberos AES256 or AES128 encryption. |
| LDAP                    | Open LDAP 2.4.x  
  Oracle DSADM 11.1.1.7.0 and later  
  Microsoft Active Directory:  
  - Windows Server 2016  
  - Windows Server 2012 R2  
  - Windows Server 2012  
  - Windows Server 2008 R2  
  - Windows Server 2008  
  - Windows 2003 R2  
    (OneFS 7.x and earlier) | |
| NIS                     | NIS ypserv 2.19 and later | OneFS does not support the following features in Active Directory environments:  
  - File Integrity Levels  
  - Claims Based Identity and Access Control  
  OneFS supports Security Identifier (SID) history |
| Windows Active Directory| Windows Server 2016  
  Windows Server 2012 R2  
  Windows Server 2012  
  Windows Server 2008 R2  
  Windows Server 2008  
  Windows 2003 R2  
    (OneFS 7.x and earlier) | |

Software
Supported clients

The table in this section lists the clients supported by OneFS.

OneFS supports the following clients. Clients running OS X can connect to an Isilon cluster using the NFS or SMB protocol.

<table>
<thead>
<tr>
<th>Supported Clients</th>
</tr>
</thead>
<tbody>
<tr>
<td>Any NFS client that complies with the published NFSv3 or NFSv4.0 protocol standards.</td>
</tr>
<tr>
<td>Any SMB client that complies with the SMB2 or SMB3 protocol specifications.</td>
</tr>
<tr>
<td>EMC Isilon tests the following SMB clients:</td>
</tr>
<tr>
<td>• Windows 7</td>
</tr>
<tr>
<td>• Windows 8.1</td>
</tr>
<tr>
<td>• Windows 10</td>
</tr>
<tr>
<td>• Windows Server 2008</td>
</tr>
<tr>
<td>• Windows Server 2008 R2</td>
</tr>
<tr>
<td>• Windows Server 2012</td>
</tr>
<tr>
<td>• OS X 10.9</td>
</tr>
<tr>
<td>• OS X 10.10</td>
</tr>
<tr>
<td>• OS X 10.11</td>
</tr>
</tbody>
</table>

Mac OS X

Clients running Mac OS X can connect to an Isilon cluster using the NFS or SMB protocol. To take advantage of SMB2 features such as color tagging files with Mac OS X 10.11, enable the SMB2 extensions.

**Note**

* OS X 10.4 (Tiger) is compatible with OneFS only over NFS. OS X 10.4 over SMB is not supported.

Unsupported clients

The table in this section lists the clients that are not supported by OneFS.

<table>
<thead>
<tr>
<th>Unsupported Clients</th>
</tr>
</thead>
<tbody>
<tr>
<td>Windows NT 4.0</td>
</tr>
<tr>
<td>AIX (Native SMB Client)</td>
</tr>
<tr>
<td>HPUX (Native SMB Client)</td>
</tr>
<tr>
<td>Any other SMBv1 client that uses only ASCII for setup and teardown</td>
</tr>
</tbody>
</table>
Web browsers

The OneFS and InsightIQ web interfaces support most modern web browsers with JavaScript, cookies, and SSL enabled. Adobe Flash is required to view charts.

The OneFS and InsightIQ web interfaces were tested with the following web browsers. OneFS and InsightIQ might work with different browsers or newer browser versions that have not been tested for compatibility. You should exercise caution before using an unsupported browser.

<table>
<thead>
<tr>
<th>Browser</th>
<th>OneFS Compatibility</th>
</tr>
</thead>
<tbody>
<tr>

</thead>
<tbody>
<tr>
<td>Chrome</td>
<td>Use the latest stable version of Chrome.</td>
</tr>
<tr>
<td>Firefox</td>
<td>Use the latest stable version of Firefox.</td>
</tr>
</tbody>
</table>
| Internet Explorer | Internet Explorer 10 (works with IIQ 3.0, 3.1)  
                      Internet Explorer 11 (works with IIQ 3.2, IIQ 4.x) |
| Microsoft Edge    | Use the latest stable version of Microsoft Edge. |
| Safari (Mac OS X) | Safari 5 (works with IIQ 2.5, 3.0, 3.1)  
                      Safari 8 (works with IIQ 3.2)  
                      Safari 9 (works with IIQ 4.0)  
                      Safari 10 (works with IIQ 4.0, 4.1) |

Note

To access InsightIQ 2.5 and earlier through Internet Explorer, you must first install the Google Chrome Frame plug-in. If InsightIQ cannot detect the plug-in, an installation prompt appears the first time that you attempt to access InsightIQ through Internet Explorer.

Google is discontinuing support for Chrome Frame. Later versions of InsightIQ will allow you to access InsightIQ through Internet Explorer without requiring the Chrome Frame plug-in.
Apache HTTP Server

The table in this section lists the versions of the Apache HTTP server that are supported by OneFS.

OneFS supports Apache HTTP Server. Version 2.2.x is recommended. Support for Apache HTTP Server 1.3.x was removed in OneFS 6.0.

<table>
<thead>
<tr>
<th>Apache HTTP Server 2.2.x</th>
<th>7.0.x**</th>
<th>7.1.x **</th>
<th>7.2.x</th>
<th>8.0.x</th>
<th>8.1.x</th>
</tr>
</thead>
</table>

**This version of OneFS is no longer supported. For information about the support and service life cycle dates for Isilon hardware and software products, see the Isilon Product Availability Guide.

Aspera Enterprise Server

The table in this section lists the versions of Aspera Enterprise Server that are supported by OneFS.

Each version of the OneFS operating system might require a different version of Aspera Enterprise Server. The following table lists the versions of Aspera Enterprise Server that are compatible with OneFS. For more information, see the white paper Aspera Enterprise Server for EMC Isilon.

To download Aspera, go to the Aspera Enterprise Server for Isilon web site.

For information about installing and upgrading Aspera in OneFS 8.0.0 and later, see the OneFS 8.0.0 Upgrade Planning and Process Guide.

**This version of OneFS is no longer supported. For information about the support and service life cycle dates for Isilon hardware and software products, see the Isilon Product Availability Guide.
Migration tools

OneFS supports migrating data onto Isilon clusters through built-in data migration tools. The tables in this section list the migration tools that are compatible with OneFS.

You can migrate data from NetApp storage systems through the `isi_vol_copy` tool and you can migrate data from VNXs through the `isi_vol_copy_vnx` tool. The following tables list the compatible versions of the OneFS `isi_vol_copy` command and NetApp Data ONTAP® and the OneFS `isi_vol_copy_vnx` command and DART, and VNXOE systems.

Note

The `isi_vol_copy` command is not supported for migration from NetApp Clustered Data ONTAP (CDOT)® systems. The `isi_vol_copy_vnx` command is not supported for migration from VNXe systems.

Where provided, an exact OneFS version number indicates the minimum version of OneFS that is required.

See the Isilon OneFS Migration Tools Guide for complete information.

**This version of OneFS is no longer supported. For information about the support and service life cycle dates for Isilon hardware and software products, see the Isilon Product Availability Guide.

File transfer applications

OneFS supports the rsync open source file transfer utility. The table in this section lists the compatible versions of OneFS and rsync.

The rsync utility is an open source utility that provides incremental file transfers between Unix-based systems using an SSH connection. rsync is supported as a standard Unix-level program.

Where provided, an exact OneFS version number indicates the minimum version of OneFS that is required.

<table>
<thead>

**This version of OneFS is no longer supported. For information about the support and service life cycle dates for Isilon hardware and software products, see the Isilon Product Availability Guide.

OneFS Simulator

This section lists the system requirements for installing OneFS Simulator virtual nodes.

OneFS Simulator is a virtual version of the physical storage nodes that you can deploy in a physical infrastructure.

Before you install a virtual node, verify that your system meets the requirements for the virtual version of OneFS. At least three virtual nodes are required to create an Isilon OneFS virtual cluster.

Virtual nodes are for demonstration purposes only and are ineligible for support or repair by Isilon Technical Support.
<table>
<thead>
<tr>
<th>Component</th>
<th>Value</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>RAM</td>
<td>Minimum of 2 GB RAM for a virtual node. This is the default requirement. 6 GB RAM recommended per virtual node per ESXi host.</td>
<td>Virtual nodes might not function correctly if they do not meet the recommended memory requirements. Note A minimum of 2.5 GB RAM per virtual node is required for a fully populated virtual cluster.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Note Other nodes that are added to your virtual environment to provide services such as the Active Directory domain controller service or DNS service, will have additional memory requirements.</td>
</tr>
<tr>

Software
OneFS Anti-virus compatibility

Isilon OneFS supports the ICAP standard.
IsilonOneFS supports all anti-virus software that follows the ICAP standard.
CHAPTER 3
Protocols

This chapter includes the following topics.

- File system protocols ................................................................. 24
- HDFS (Hadoop) ........................................................................... 24
- SNMP ........................................................................................... 25
- Isilon with iSCSI ........................................................................ 25
File system protocols

The tables in this section list the file system protocols that are compatible with OneFS.

OneFS supports the Network File System (NFS) and Server Messenger Block (SMB) file system protocols. For information about how to configure NFS and SMB for OneFS, see the OneFS Administration Guide for your OneFS version.

Note

Where provided, an exact OneFS version number indicates the minimum version of OneFS that is required.

NFS

NFS is a client and server application that lets users view and optionally store and update files on a network as if the files were saved in a local file directory. The NFS protocol is designed to be independent of the computer, operating system, network architecture, and transport protocol.

<table>
<thead>
<tr>
<th>NFS</th>
<th>OneFS Compatibility</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>7.0.x**</td>
</tr>
<tr>
<td>NFS 2</td>
<td>*</td>
</tr>
<tr>
<td>NFS 3</td>
<td>*</td>
</tr>
<tr>
<td>NFS 4.0</td>
<td>*</td>
</tr>
</tbody>
</table>

SMB

SMB is an Internet protocol used by Windows computers to share files, printers, and serial ports.

<table>
<thead>
<tr>

</tr>
<tr>
<td>SMB 3</td>
<td>7.1.1</td>
</tr>
</tbody>
</table>

**This version of OneFS is no longer supported. For information about the support and service life cycle dates for Isilon hardware and software products, see the Isilon Product Availability Guide.

HDFS (Hadoop)

OneFS supports many distributions of the Hadoop Distributed File System (HDFS).

Hadoop is an open source software project that enables distributed processing of large data sets—Big Data—across clusters of servers. Hadoop is perfect for situations where you want to quickly and cost-effectively run analytics that are deep and computationally extensive.
Hadoop distributions are updated independently of OneFS and on their own schedules. For the latest information about Hadoop distributions that OneFS supports, see Supported Hadoop Distributions in OneFS on the EMC Community Network (ECN).

For information about how Isilon Scale-out NAS can be used to support a Hadoop data analytics workflow, see Hadoop on Isilon Scale-out NAS.

### SNMP

OneFS supports the Simple Network Management Protocol (SNMP). This section lists the compatible versions of SNMP and OneFS.

Simple Network Management Protocol (SNMP) is a popular protocol for network management. You can use SNMP to remotely monitor hardware components (for example, fans, hardware sensors, power supplies, and disks) and software or subsystems for network-connected devices (for example, network interfaces, servers, switches, and CPU use). You can enable SNMP monitoring on individual nodes on your cluster. You can also monitor cluster information from any node.

For information about how to configure SNMP for OneFS, see the OneFS Administration Guide.

<table>
<thead>
<tr>
<th>SNMP</th>

<td>*   *   *   *</td>
</tr>
<tr>
<td>SNMP 3</td>
<td>*   *   *   *</td>
</tr>
</tbody>
</table>

### Isilon with iSCSI

The following table lists the iSCSI initiators that are supported by the OneFS implementation of iSCSI.

These limitations apply:

- MC/S (Multiple Connections per Session) is not supported.
- iSCSI host bus adapters (HBAs) are not supported.
- iSNS (Internet Storage Name Service) protocol is supported on Microsoft Windows for use by the Microsoft iSNS Server service only.

**Note**

Support for iSCSI is deprecated as of OneFS 8.0.0.0.

<table>
<thead>
<tr>

CHAPTER 4
Hardware

The tables in this section contain OneFS and hardware compatibility information.

- OneFS and node compatibility ................................................................. 28
- Node class compatibility ........................................................................ 29
- Drive and node compatibility ................................................................ 30
- Embedded flash storage ........................................................................ 31
- Node firmware package (NFP) ................................................................. 32
- Drive support package (DSP) ................................................................. 32
- Qualified Generation 6 optics for front end NICs .................................... 33
- Qualified Generation 5 10GbE (SFP/SFP+) transceivers ......................... 33
- Qualified Generation 5 40GbE transceivers ........................................... 34
- Generation 4 10GbE (SFP/SFP+) transceivers ........................................ 35
OneFS and node compatibility

The tables in this section list compatible versions of OneFS and Isilon nodes. Where provided, an exact version number indicates the minimum version of OneFS that is required.

Isilon Generation 6 platforms
The following are Isilon Generation 6 platforms. Generation 6 node types require OneFS 8.1.0 and later releases.

- F-Series (F800)
- H-Series (H400, H500, H600)

Isilon Generation 4 and Generation 5 platforms
The following are Isilon Generation 4 and Generation 5 platforms.

- S-Series – The answer for ultra-performance primary storage, purpose-built for high transactional and IOPS-intensive applications.
- X-Series – Strikes the right balance between large capacity and high-performance, an ideal solution for high throughput and high concurrency applications.
- NL- and HD-Series – Designed to provide cost-effective, highly scalable near-line storage.

Note
S210 and X410 node types require OneFS 7.1.1.4 or later releases. Creating new clusters that include S210 or X410 node types or adding S210 nodes to existing clusters with versions earlier than OneFS 7.1.1.4 is not supported. S210 and X410 nodes have internal components not supported in earlier versions of OneFS.

For information about OneFS and node compatibility in OneFS 7.2 and later releases, see the Node Compatibility (Equivalency) and SSD Compatibility in OneFS 7.2 and Later - Isilon Info Hub.

Isilon S-Series and X-Series nodes

<table>

</tr>
<tr>
<td>IQ Performance Accelerator-x</td>
<td>+</td>
</tr>
</tbody>
</table>

Node class compatibility

Node class compatibility enables you to deploy a newer-generation node to a SmartPools node pool that contains nodes from an earlier generation.

If the node classes are compatible, you can join a newer-generation node to an existing cluster of earlier-generation nodes while having the newer-generation node become a member of an existing node pool. For example, if your cluster has a node pool that is made up of Isilon X200 nodes, you can define a compatibility that enables you to add an X210 node to the same node pool.

OneFS supports compatibilities for S200/ S210, X200/X210, X400/X410, and NL400/ NL410 nodes.

Node class compatibilities apply to OneFS 7.2 and later releases. The requirements are:

- Same node series (S, X, or NL)
- Same number of HDDs, SEDs, and SSDs
- Same HDD and SSD layouts
- Compatible node generations must have a compatible memory configuration
- SSD capacity must be the same in OneFS 7.2
- SSD capacity does not have to be the same in OneFS 7.2.1 (SSD Compatibility feature)
- Compatible RAM

The following tables list the compatible Isilon node classes in OneFS 7.2.1.

**Table 3** S200/S210 Compatibility

**Drive and node compatibility**

This section contains information about drive and node compatibility.

For information about the brands of drives that are compatible with Isilon nodes and OneFS, contact your Isilon sales representative or Isilon Technical Support. For information about how drives are arranged in a node, or how to replace a drive, refer
to the hardware documentation for your brand of node. Hardware documentation is available from the EMC Online Support website.

## Embedded flash storage

The table in this section lists the embedded flash drives that are compatible with OneFS.

</table>
Node firmware package (NFP)

The table in this section lists the Node Firmware Packages that are compatible with Isilon nodes.

Node Firmware Packages are provided by Isilon Technical Support. For information about Node Firmware Packages, see the product documentation that is available from the EMC Online Support website.

<table>
<thead>
<tr>
<th>Generation</th>
<th>Node Type</th>
<th>9.3.5</th>
<th>Latest 10.x</th>
</tr>
</thead>
<tbody>
<tr>
<td>4</td>
<td>S200, X200, X400, NL400</td>
<td>*</td>

</tr>
<tr>
<td>6</td>
<td>F800, H600, H500, H400, A200, A2000</td>
<td></td>
<td>*</td>
</tr>
</tbody>
</table>

**Note**

Only update firmware with the latest Node Firmware Package 10.x if your cluster contains Generation 6 or Generation 5 hardware. If your cluster does not contain Generation 6 or Generation 5 hardware, update your firmware with Node Firmware Package 9.3.5.

**Note**

The S210, X210, X410, and NL410 nodes are compatible with Node Firmware Package 9.0.1 and later.

The F-Series, H-Series, and A200 and A2000 nodes are compatible with OneFS 8.1.x and later releases.

Drive support package (DSP)

Isilon drive support packages contain drive firmware updates for Isilon clusters.

Installing the latest drive support package allows you to update the drive firmware to the latest supported revisions.

You can install a drive support package if your cluster contains only the following node types:

- Generation 4: S200, X200, X400, NL400
- Generation 5: S210, X210, X410, NL410, HD400
- Generation 6: F800, H600, H500, H400, A200, A2000

For information about installing and applying drive support packages—as well as information about preparing OneFS before updating drive firmware—see the Isilon Drive Support Package Release Notes.
Qualified Generation 6 optics for front end NICs

This section lists the Generation 6 optics that are qualified by Dell EMC for front end network interface cards (NICs).

<table>
<thead>
<tr>
<th>Optic</th>
<th>Part #</th>
<th>Cable length(s) supported</th>
<th>Comments</th>

</tr>
</tbody>
</table>

**Note**

40GE NICs require the following minimum firmware level to support the Cisco BiDi Optics:

- Mellanox 2.40.5030

Qualified Generation 5 10GbE (SFP/SFP+) transceivers

This section lists the supported and recommended NICs, compatible nodes, and the supported and recommended 10GbE (SFP/SFP+) transceivers for Generation 5 nodes.

**Note**

Because of the quantity and variety of SFP/SFP+ transceivers that exist, Isilon cannot test or qualify all the transceivers that are available. It is possible that some SFP/SFP+ transceivers that have been reported to work by other sources might not work in all environments. You should contact your Isilon sales representative if you have any questions.

The following are the supported network interface cards (NICs) and compatible nodes.

<table>

Qualified Generation 5 40GbE transceivers

The table in this section lists the supported and recommended 40GbE (QSFP/QSFP+) transceivers for Generation 5 nodes.

**Note**

Because of the quantity and variety of 40GbE transceivers that exist, Isilon cannot test or qualify all the transceivers that are available. It is possible that some 40GbE transceivers that have been reported to work by other sources might not work in all environments. You should contact your Isilon sales representative if you have any questions.

The following are the supported network interface cards (NICs) and compatible nodes.

</tbody>
</table>

*Not sold by Dell EMC. Qualified for use only Mellanox 40GE NIC and Cisco 9332PQ switch.

**Note**

40GE NICs require the following minimum firmware level to support the Cisco BiDi Optics:

- Mellanox 2.40.5030
## Generation 4 10GbE (SFP/SFP+) transceivers

The table in this section lists 10GbE (SFP/SFP+) transceivers that have been certified by Isilon or have been reported by other sources to work with Isilon Generation 4 nodes.

**Note**

Because of the quantity and variety of SFP/SFP+ transceivers that exist, Isilon cannot test or qualify all the transceivers that are available. It is possible that some SFP/SFP+ transceivers that have been reported to work by other sources might not work in all environments. You should contact your Isilon sales representative if you have any questions.
