

# HYPER-CONVERGED GOES MAINSTREAM: MODERNIZE YOUR DATA CENTER AND TRANSFORM IT

The pace of today's digital business is driving the need for IT Transformation. Modernizing your data center infrastructure can dramatically improve the ability of IT to meet new business demands.

IT organizations need to support greater business agility and value through:

- Scalability, flexibility and performance for a wide range of workloads and applications
- Fewer silos and reduced deployment complexity
- Strong data protection capabilities
- Streamlined, cost-effective operations and management
- Adaptability for automation through cloud and other new technologies
- Improved use of data and analytics
- Better alignment of IT performance metrics to business outcomes
- Serving new business needs quickly and economically

To meet these requirements, companies are increasingly turning to hyper-converged infrastructure (HCI) to provide a flexible core system for running mission-critical applications. IDG Research recently found that 85% of IT leaders say their companies already use or are planning to use HCI. HCI implementers report lower costs, improved customer experience, and better productivity – HCI is 73% faster to deploy than standard server infrastructures and yields 98% less downtime.

**With Dell EMC hyper-converged solutions, customers were able to:**

Reduce recurring monthly costs by  
**80%**

Consolidate servers from  
**90 to 2**

Activate virtual machines in less than  
**15 minutes**

## Deliver real business value by transforming IT with hyper-converged

IT organizations are choosing HCI to simplify infrastructure deployment and management, better utilize cloud services, scale for more data, and increase support for business applications. Make the move to a modern data center with HCI and other advanced technologies from Dell EMC, powered by Intel®. Make innovation real with IT Transformation.
