

DATA PROTECTION FOR VMWARE CLOUD™ ON AWS – MADE EASY BY DELL EMC

Dell EMC makes it easy to protect VMware workloads on Amazon Web Services (AWS) with an all-in-one bundle that is cost effective and provides simplicity in purchasing and pricing.

Seamlessly protect VMware Cloud™ on AWS workloads with Dell EMC Data Protection Bundle.

Dell EMC was the first VMware partner to provide VMware certified data protection for VMware Cloud™ on AWS with our Data Protection Software that provides enterprise-grade data protection, best-in-class deduplication, and integrated management for on premise and cloud workloads.

We are now making it even easier for organizations to protect their VMware Cloud™ on AWS environments with a bundle that includes Dell EMC Data Protection Software and Data Domain Virtual Edition. Our Data Protection for VMware Cloud™ on AWS bundle provides many advantages:

- Purchased as a single product that includes all necessary Dell EMC software for backing up and recovering VMware Cloud on AWS workloads
- Similar to VMware Cloud on AWS, priced on a per host subscription model – 1 or 3 year subscription
- Industry leading Data Domain deduplication to reduce backup storage capacity needs
- vSphere integration and attractive pricing that makes it painless to protect VMware Cloud™ workloads on AWS

Easily expand VMware environments to the cloud.

VMware Cloud™ on AWS enables organizations to run vSphere based cloud environments on AWS public cloud. Powered by VMware Cloud™ Foundation, this service integrates vSphere, vSAN and NSX and enables vAdmins to manage cloud resources with familiar VMware tools. Optimized to run on elastic, bare metal AWS infrastructure, the service provides enterprise-grade capabilities, a flexible subscription based consumption model, and is managed by VMware. The service is ideal for many use cases, including application migration, DR, on-demand capacity, and dev/test.

Dell EMC Data Protection for VMware Cloud™ on AWS Key Benefits

- Proven enterprise data protection for the enterprise public cloud
- Seamless integration with on-premises data protection
- Industry's best-in-class deduplication leads to lower consumption costs
- Protects VMware workloads on AWS storage for increased resiliency
- Natively integrates into VMware management tools for the ultimate automation experience
