### ABOUT DATADOBI

**DobiMiner® is the CAS Storage Migration Software of Choice for Hundreds of Companies Around the World.**

### OVERVIEW

When faced with the pain of a long, labor-intensive, skill-absorbing, and error-prone migration, DobiMiner is the fix. DobiMiner brings automation, advanced engineering, and embedded intelligence that will completely revolutionize your platform migrations:

- **BUILT – IN DISCOVERY** - DobiMiner extracts the metadata from your storage platform and gives you powerful insights — what is stored, who stored it, when it is accessed, and more — so you can have a complete, holistic view of your data and users to intelligently plan your migration.
- **BUILT TO SCALE** – DobiMiner can handle any size of CAS storage environment from a few Terabytes to multiple clusters distributed globally. Multiple instances with advanced throttling can be deployed quickly and easily to maximize network throughput and minimize disruptions to the users.
- **WORKFLOW BASED** – DobiMiner will inform you about ongoing activities and clearly indicate when your input is needed. You can track all the migration steps in real-time from a high level view down to a granular detailed report.
- **SIMPLE & INTUITIVE INTERFACE** – DobiMiner allows you to centrally manage your project via a simple, easy-to-use web interface. You can also monitor progress remotely via the ‘Email Home’ feature.
- **LOW TOUCH PLANNING** – DobiMiner can help you plan and execute your switch over windows for a smooth transfer of users and applications to your new storage platform. It allows you to deal with last minute changes swiftly in a low-touch manner.

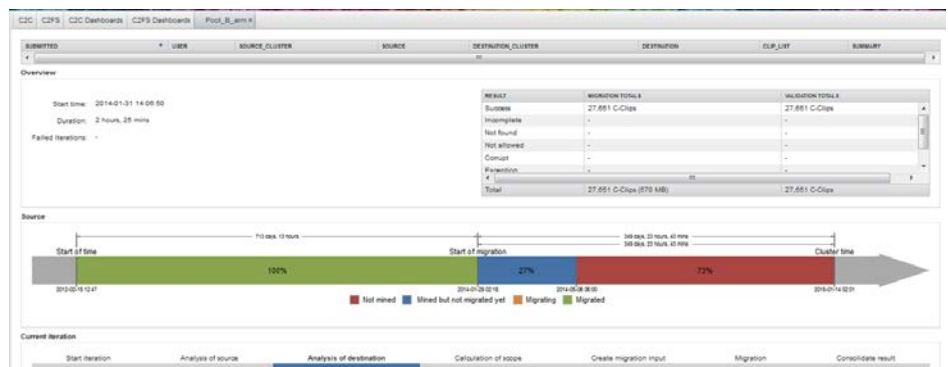

## DOBIMINER KEY BENEFITS

DobiMiner is an end-to-end platform migration solution that helps reduce effort, cost, and duration:

- **EASY TO DEPLOY** – DobiMiner can be up and running within an hour through easy-to-use installers and virtual instances as a software-only solution.
- **REDUCE YOUR EFFORT** – DobiMiner takes away the repetitive work and allows you to focus on what matters: to manage by exception and resolve issues highlighted to you by DobiMiner.
- **SHORTER DURATION** – DobiMiner's speed and flexible planning helps you to optimize the planning and switch over of users and applications to the new storage system quickly. DobiMiner migration speeds are 2 – 5 times faster than native utilities.
- **FLEXIBILITY** – DobiMiner will support you in absorbing any last minute business, infrastructure, network, or operational restrictions that would impact the migration project and team.
- **DEAL WITH COMPLEXITY** – DobiMiner takes away the complexity that comes with an increase in the number of clusters, users, applications, and data to be migrated because you can group and track servers together with their own planning, progress reporting, and issue tracking.
- **NON-INTRUSIVE** – DobiMiner allows you to run the migration project as transparently and non-intrusively as possible to ongoing business operations. Multi-threading, throttling, and scheduling gives you the options you need to seamlessly blend into your infrastructure.
- **MAINTAIN CONTROL** - DobiMiner allows you to take control over the migration activities as they progress. This includes prioritization within the planning, migration granularity, and network usage. At any point in time during the activities, accurate ETAs, and durations help you set expectations with your stakeholders.
